

ETHICS

as

INFORMATION ARCHITECTURE

Christian Crumlish · IAC26 · April 17, 2026

AFTERTHOUGHT

ethics bolted on at the end

guardrails

at the edge of the cliff

vs.

a road that doesn't go there

STRUCTURE

determines possibility

**You've known this
for years.**

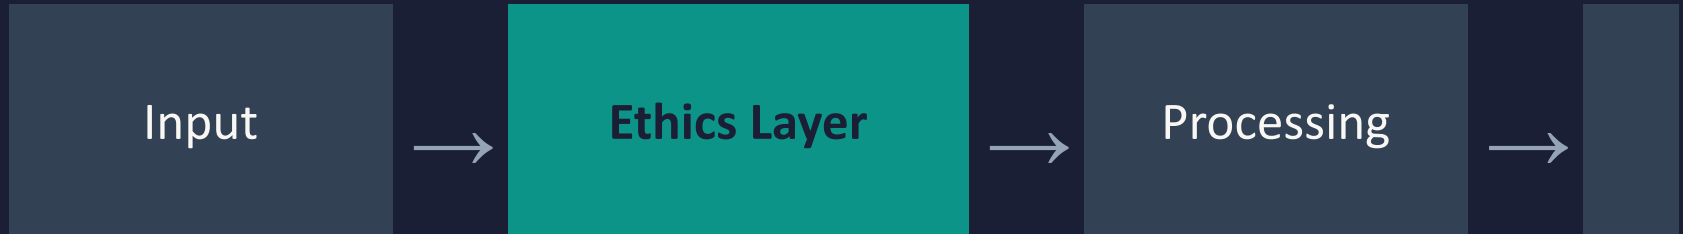

INHABITED

spaces with new kinds of inhabitants

BEFORE

not after

boundary enforcement

ethical constraints check requests before AI ever sees them

HIERARCHY

resolves conflicts in advance

some decisions
require human action
to proceed

not because of policy — because of structure

80.3%

clustering accuracy

zero content analysis

privacy as architectural choice

CHOICE

not compromise

NEEDED

your skills, this domain

Don't cede
this territory.

The domain is new. The stakes are higher.

But the skills are yours.

Not through policy.

Through structure.

You already know how to do this.
